We are Coromatic

We enable companies and organizations to run their operations without disruption

We enable companies and organizations to run their operations without disruption.

Digitalization makes things possible that we could once only dream about, while challenging traditional business models. Digitalization helps companies save time and money, while making more products and services available to more customers at a lower cost. We will see many exciting opportunities and applications emerge in the future.

New demands on infrastructure

However, digitalization also puts entirely new demands on infrastructure, with seemingly basic things such as power supply and data communication becoming crucial in terms of maintaining operations. Having been regarded in the past as support functions, communication is critical for any organization.

For example, what would banks do without an internet connection? Or mobile operators without functioning base stations? Or hospitals without operating X-ray machines? Robust and stable data communication is quite simply vital to the functioning of all organizations. This is why we call it mission critical infrastructure.

As the leading supplier of mission critical infrastructure solutions, for example, data centers, Coromatic secures access to power supply and data communication. Put simply, we enable companies and organizations to run their operations without disruption.

Coromatic has a unique and comprehensive service offering, and we take full responsibility from strategy and design to the integration, maintenance and operation of business-critical infrastructure. Our expertise includes energy-efficient comprehen-

sive solutions for power, cooling, networks, data communication and security.

Advisory service

In pace with digitalization and the fact that operations now need to function 24/7, investment in mission-critical facilities is becoming an increasingly complex and strategic issue. Along with our team of senior advisors, we help organizations analyze their requirements, create strategies for mission-critical facilities and implement these to guarantee that the installations function without disruption.

As the leading supplier of mission critical infrastructure solutions, for example, data centers, Coromatic secures access to power supply and data communication.

We can assist with any form of technical advice and can supply everything from infrastructure parts to complete, turnkey facilities. All of this leads to enhanced efficiency and performance improvements at a reduced cost.

Proximity to service

We have a strong, local service organization with specially trained technicians who ensure disruption-free operations around the clock. We always draw up an adapted service and maintenance plan to ensure that our customers always

have the right technician on site, within a guaranteed time frame.

Full responsibility for operations 24/7

We can take varying levels of operational responsibility for our customers' mission-critical facilities. One way is for us to take over the operation of your physical infrastructure. This means that we would be prepared to guarantee continuous operation of your facility 24/7, 365 days a year.

Our work is covered by service level agreements and we guarantee that all work, consumables and spare parts are included in the fixed ongoing service charge. Together, we work out what your requirements are, as well as which performance indicators are to be reported.

Sustainability

Energy consumption is increasing in line with the growing need for IT. At Coromatic, we place great emphasis on energy initiatives, from the planning stage right through to the continuous operation of facilities.

For our customers, energy optimization leads to both reduced energy costs, and sends out an important message regarding the company's sustainability initiatives.

Pre fabricated datacenter

Coromatic International project manages and supplies pre-fabricated data centers to countries across the globe. We take full responsibility for the entire process, from planning and design to production, delivery and operation of the data centers, regardless of whether it's in Nepal, Rwanda or Somalia.

About Coromatic

Coromatic works across the entire globe. We have supplied solutions and services for mission-critical infrastructure to over 1,000 companies and organizations in more than 50 countries, from every kind of sector.
