Emergency power secures 100% uptime for Green Mountain

Emergency power secures 100% uptime for Green Mountain

Green Mountain was established in 2013 and designs, builds and operates the world's most secure data centers. One of the data centers is located in Rennesøy outside of Stavanger, while the second one is in Rjukan, Telemark county. Co-location as a service is experiencing a tremendous growth, and Green Mountain plans to build a third data center in the near future. Green Mountain has customers within several segments such as banking and finance, the health sector and cloud services. The solutions provided are at such a high security level that they can never fail.

The cooperation with Coromatic

When Green Mountain was planning the construction of the data center, they knew they needed a supplier of emergency power.

– We assessed different suppliers, but the choice fell on Coromatic due to their competitiveness in the market and their optimal technical solution, says Tor Kristian Gyland, CEO in Green Mountain.

Since the data center was built from scratch, the customer required a total delivery. Accordingly, Coromatic delivered a tailor-made solution consisting of advisory, project management, design and implementation of five large generator sets with a total power of 12 500 kVA. The complete offer was convenient and predictable for the customer.

– Coromatic has specialist knowledge on emergency power, and our solutions secure critical functions in the whole Nordic region. Backup power is invaluable if an unexpected failure occurs in the data center. It has been a privilege to cooperate with Green Mountain, says Arild Jensen, Sales Manager and Head of Business Development in Coromatic.

The delivery from Coromatic is a fundamental part of our critical operations since it secures the SLA – agreements we have with our customers.

– There are numerous advantages of having Coromatic as a partner. It is their ability to understand our business requirements and choose the right design based on our quite rigid requirements.

But it is also the ability to deliver the solution exactly as requested. This is the case when it comes to handover and testing, but also maintenance throughout the whole life cycle, says Gyland.

Today's situation

Coromatic's solution has worked optimally and Green Mountain has successfully achieved 100% uptime on both data centers since the beginning.

– We are very content with the delivery from Coromatic and we now have a partner we can trust. Securing power supply at all times is the most critical element in our operations. We are dependent upon the competence and quality we gain from our cooperating with Coromatic, says Gyland.

Coromatic secure availability of power and data communications for mission-critical functions. We are here 24/7 for our customers to ensure high availability and productivity in facilities, to save lives by securing operations without disruptions and to protect the environment by optimizing energy consumption.
